

520nm 10mW LD

By converting the external APC circuit board into an ASIC, we package the APC circuit into a traditional TO-can together with the laser chip. From now on, single package APC function included laser diode is realized.

Powered with Arima's proprietary APC **LASER DIODE** ^{TE} technology, **ADL-52101SB4** is your perfect solution for the stable light power output, compact size, high brightness laser light source.

Features

1. 520nm 10mW 50°C high reliable operation
2. Saving space and cost of laser module
3. Voltage driven LD, easy to use
4. Highly stable laser output power
5. Strong reverse bias protection
6. High ESD sustainability
7. Stable output power vs. supply voltage from 6.0V to 7.0V.

Applications

1. Industry : laser level, illumination, meter, scanner, detector
2. Consumer : pointer light, sweeper, TV game lighting
3. Health : special wavelength light source

Absolute maximum ratings

Parameter	Symbol	Rating	Unit
Power supply voltage	V _{cc}	6.0~7.0	V
Laser optical output power	P _o	10.0	mW
Case temperature	T _c	-10 ~ +50	°C
Storage temperature	T _{stg}	-40 ~ +85	°C

Electrical and optical characteristics (T_c=25 °C)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Wavelength	λ	510	520	530	nm	P _o =10mW
Operation current	I _{cc}	-	70	100	mA	P _o =10mW
Variable resistor	VR	0.5	4	8	KΩ	V _{cc} =6V
Parallel divergence angle	θ _{//}	3	7	12	Deg	P _o =10mW
Perpendicular divergence angle	θ _⊥	15	23	30	Deg	
Parallel FFP deviation angle	Δθ _{//}	-5.0	0	+5.0	Deg	
Perpendicular FFP deviation angle	Δθ _⊥	-5.0	0	+5.0	Deg	
Emission point accuracy	ΔxΔyΔz	-80	0	+80	um	
Power-Temp stability (25~50°C)	ΔP _o T	-15		10	%	
Power-V _{cc} stability (7.0~6.5V)	ΔP _o V	-15		10	%	P _o =10mW, Temp=25°C
Power-V _{cc} stability (6.5~6.0V)	ΔP _o V	-15		10	%	P _o =10mW, Temp=25°C

* Effective heat sink is recommended on 6V case due to extra heat

520nm 10mW LD

Block Diagram

1. Traditional LD needs to connect an external APC circuit board for the constant power operation. The VR (variable resistor) is used to adjust the laser output to a desired target power.
2. **ADL-52101SB4** consists an APC IC inside the **TO-3.3mm** package, and leaves the VR outside for adjusting the optical output power.
3. Oscillation Damper is recommended for stabilizing the optical output power.
4. Battery reverse protection is recommended for protecting the APC Circuit.

1. GND
2. Vcc
3. VR

Outline Dimension & Pin Assignment

1. GND
2. Vcc
3. VR

● Precautions

- * To protect laser from overdriving condition, setting VR to maximum value before you turn on Vcc can minimized the laser output power.
- * Do not operate the device above the maximum rating condition, even momentarily. It may cause unexpected permanent damage to the device.
- * Semiconductor laser device is very sensitive to electrostatic discharge. High voltage spike current may change the characteristics of the device, or malfunction at any time during its service period. Therefore, proper measures for preventing electrostatic discharge are strongly recommended.
- * To obtain a stable characteristic and good reliability, the effective heat sink is necessary. So it is recommended that always apply proper heat sink before the device is operating.
- * Do not look into the laser beam directly by bare eyes. The laser beam may cause severe damage to human eyes.
